

1 in 20 children may have an Auditory Processing Disorder (APD)

Signs of APD

"Take your exercise book out of your bag. Go to page four and answer the first three questions."

Children with APD can hear, but have trouble understanding what they hear, which can adversely affect educational achievement and behaviour.

Signs of APD include:

- Difficulties comprehending spoken language unless brief, clear and simple
- Hearing difficulty against other background sound
- Poor auditory memory (eg difficulty following instructions)
- Problems with speech, language, phonics, spelling, reading or written language.

SoundSkills specialises in the diagnosis and treatment of APD to help enable better learning.

For more information, a brochure, or to attend a FREE SEMINAR about APD please contact SoundSkills at: clinic@soundskills.co.nz, visit www.soundskills.co.nz or call (09) 930 8573.
